2019 AcademyHealth National Health Policy Conference –
Call for Proposals: Session Types

Policy Roundtable – Policy roundtable sessions feature a moderator and up to four panelists around a single policy topic or opportunity. Each panelist should offer a different perspective on the policy topic. We are interested in submissions reflecting a broad range of policy topics that local, state and national policymakers are currently confronting. Policy roundtables consisting of multiple representatives from a single institution are discouraged. Successful examples from last year include:

- 1332 Waivers: How States Are Making the ACA Work
- Individual Insurance Markets. What Now?

Rapid Fire Presentation - Rapid Fire Presentations will be featured in dedicated rapid fire concurrent sessions during the conference with time limits strictly enforced. Each presenter will give a 7-minute presentation – using a designated slide template -- followed by a Q&A with the audience. Rapid Fire Sessions will be organized by theme and are optimized to showcase a much broader range of policy issues and evidence. The objectives for these Rapid Fire Sessions include:

- Demonstrating opportunities in developing evidence-informed policy;
- Presenting ideas or strategies that may be useful to others implementing evidence informed policy and/or evaluating its impact; and
- Discussing potential policy implications from the current debates about various options for current health policy topics, including changes to the Affordable Care Act, Medicare, Medicaid, MACRA, and drug policy.

Successful examples from last year's Rapid Fire sessions include:

- Rapid Fire Session 1A: Consumerism, Transparency, and Choice
- Rapid Fire Session 1B: Opioids and Substance Use Disorders

Poster – Posters are organized by theme, highlighting how evidence was used or could be used to inform policy development, implementation and/or evaluation. Reports on initiatives to identify, translate and use evidence in policy are also sought. Case studies, narratives, and other methods are encouraged.
